

ABSTRACT

The present invention relates to a thermoplastic resin composition which contains plasticizers having flexibility, high transparency, little bleed out
5 and high extraction resistance to a paraffin solvent, particularly an aliphatic polyester resin composition, and sheets, films, or other products molded by the resin, and characterized that said aliphatic polyester resin composition contains a compound (A) of 1.0 mass part to 100 mass parts expressed by the following formula (1) as plasticizers to an aliphatic
10 polyester of 100
